- legacy

PROFILE

Full-stack e-commerce developer with a strong architecture and product-quality orientation. I work on PHP environments where maintainability, production stability, technical SEO, business integrations, and compliance cannot be treated as side concerns.

My best-fit context is an existing system: e-commerce platforms, business ecosystems, codebases with history, real commercial pressure, and a need to improve without breaking what already works.

POSITIONING

- Architecture & delivery**
Clarifying boundaries, hardening foundations, and keeping delivery realistic.
- Technical SEO**
Treating metadata, routing, indexability, and structured data as product concerns.
- Privacy & tracking**
Making consent boundaries, analytics, and script governance explicit and maintainable.
- Business context**
Working with catalog logic, product data, business software, and real commercial constraints.

RECENT EXPERIENCE

Full-Stack E-commerce Developer — Jewely HBJO

JUNE 2024 - PRESENT

- Full-stack development within a business-specific digital ecosystem for the jewelry and watch industry, at the intersection of e-commerce, catalog flows, product data, and business software needs. The context combines product and SaaS concerns around e-commerce and adjacent tools such as ERP, PIM, DAM, and CRM.
- evolving e-commerce and business-facing features
- working on catalog flows, product data quality, and integrations
- taking SEO, performance, and product clarity into account

Web Developer — Flippad Digital Solutions

SEPTEMBER 2021 - MAY 2024

- Worked in a multi-client environment on websites, e-commerce platforms, business tools, and product-oriented R&D, including audience tracking, catalog synchronization, CMP-related work, Jamstack-like e-commerce exploration, jewelry ERP exploration, and the Flippad.com rebuild.
- What I bring**
The ability to raise the quality of a live system without overplaying rupture: better readability, stronger boundaries, steadier delivery, and a clearer relationship between engineering, SEO, compliance, and product reality.

SELECTED PROJECTS

Jewelry HBJO

Business-specific digital ecosystem for jewelry, watches, and related retail operations.

Sidewalk Studio

Laravel reference implementation focused on architecture, SEO, consent, content, and design systems.

Godechot Pauliet

Audience tracking, catalog synchronization, and e-commerce / marketing data work.

YTMusic Liked Sorter

CLI project showing a structured mindset: typing, cache, logging, dry-run behavior, and reliability.

EDUCATION

Metz Numeric School

Bachelor's degree, Full-Stack Development
September 2021 - October 2022

Meshwork Academy

Web and mobile development
2020 - 2021

University of Lorraine

Biology degree
2012 - 2016

CERTIFICATIONS

OpenClassrooms

Learn the Command Line in Terminal

Google

Fundamentals of Digital Marketing

VOLUNTEER WORK

Opéra national de Lorraine

Student cultural mediation and communication

Les Restos du Coeur

National collection support in Nancy

ADDITIONAL EXPERIENCE

Web Developer — AREMEDIA

JUNE 2020 - JANUARY 2021

Analyzed needs, deployed a self-hosted LimeSurvey stack (PHP + MySQL), worked within health-data legal constraints, and contributed to a new website direction.

Support Officer — Parcours le Monde Grand-Est

JANUARY 2018 - JANUARY 2019

Public-facing support, project guidance, and awareness work around European citizenship and mobility projects.

Mediator — ARTEM (Alliance Artem)

OCTOBER 2016 - JULY 2017

Mediation between campus schools and partner institutions, with responsibility for a sustainable-development awareness day for 170 students and 15 partners.

TECHNICAL FOCUS

Laravel and PHP application structure

WooCommerce, PrestaShop, and e-commerce logic

Inertia, Vue 3, TypeScript

Technical SEO and structured data

Consent, privacy, and analytics

REST APIs, catalog logic, and integrations

Docker, Linux, Nginx / Apache, AWS

Production debugging and gradual improvement

WORKING STYLE

I prefer readable systems over performative architecture, gradual improvement over dogmatic rewrites, and technical decisions that take product, SEO, compliance, and business reality into account together.

I am especially useful when an existing system needs clearer foundations, steadier delivery, or a calmer engineering direction without business disruption.

What I am looking for

Contexts where engineering is expected to bring clarity, stability, modernization, and sound judgment rather than just implementation throughput.

Based in Nancy, open to local, hybrid, or remote work with teams that value maintainability, clarity, and steady delivery.
