PROFILE

Web developer focused on e-commerce, product data, and technical SEO, working on systems already in motion: commerce platforms, brand sites, internal tools, catalog flows, and PHP environments with history.

I like understanding how a project is actually used, identifying quick wins early, then bringing more order without disrupting operations. My strongest context sits between delivery, business integration, practical architecture, front-end quality, and legibility for both teams and robots.

POSITIONING

Progressive recovery

Evolving existing systems without dogmatic rewrites or business disruption.

Product data

Connecting PIM, ERP, Shopify, marketing catalogs, and front-end surfaces in a usable way.

SEO & structure

Treating URLs, listing pages, product pages, metadata, and structured data as product concerns.

Front-end & tracking

Keeping Sass integration, data layer design, consent, and measurement clear and maintainable.

RECENT EXPERIENCE

Web / E-commerce Developer — Jewelry / Flippad

SEPTEMBER 2021 - PRESENT

Most of my web experience was built in that same company context, first as an apprentice and then in a broader multi-client and product delivery setup. Clients changed and scopes changed, but the foundations, methods, and growing responsibility were developed in one place.

recovering and evolving e-commerce sites, brand sites, and WordPress, WooCommerce, PrestaShop, Shopify, and Laravel/PHP projects

retrieving, cleaning, restructuring, and hydrating data coming from the PIM, the ERP, Shopify, or other in-house feeds

shaping SEO during redesigns: URL structure, listing pages, product pages, structured data, and catalog legibility

front-end integration, Sass systems, commerce components, editorial templates, and cleaner interface delivery

tracking, data layer work, Consent Mode v2, GTM, Meta Pixel, Microsoft Ads / Bing UET, Adobe Analytics, Merchant Center, and marketing catalogs

Web Developer — AREMEDIA

JUNE 2020 - JANUARY 2021

Designed a self-hosted reporting tool for field teams in a harm reduction and public health context. Deployed a PHP / MySQL LimeSurvey stack, worked within health-data constraints, handled pragmatic security concerns, and contributed to the rebuild of aremedia.org.

What I bring

The ability to read an existing system quickly, identify useful quick wins, then bring more order to flows, interfaces, and codebases without making production more fragile.

SELECTED PROJECTS

Jewely / Flippad

E-commerce and website ecosystems in the jewelry and watch sector, with catalog flows, SEO, tracking, and connected business tools.

Prudhomme Transmissions

Recovery of a WordPress site with product catalog and 3D files.

AREMEDIA / OpenSurvey

Non-profit tooling and a public-facing site in a sensitive public-health context.

Sidewalk Studio

Laravel reference focused on architecture, content, consent, SEO, and design systems.

EDUCATION

Metz Numeric School

Bachelor's degree, Full-Stack Development
September 2021 - October 2022

Meshwork Academy

Web and Mobile Development
2020 - 2021

University of Lorraine

Biology degree
2012 - 2016

ADDITIONAL SIGNALS

Jamstack / composable commerce

Technical watch and exploration around Alokai, formerly Vue Storefront

Digital marketing

Meta Ads campaigns, catalogs, tracking, and event quality

Web performance

Core Web Vitals, Cloudflare, caching, and loading architecture

COMMITMENTS

Nancy Jazz Pulsations

Regular volunteer work

EDEN

Member of a Nancy-based association focused on urbanism and cycling

La Quadrature du Net

Member supporting digital-rights advocacy

ADDITIONAL EXPERIENCE

Support Officer — Parcours le Monde Grand-Est

JANUARY 2018 - JANUARY 2019

Supported mobility projects and public-facing guidance around European citizenship, with a strong mediation and coordination dimension.

Mediator — ARTEM (Alliance Artem)

OCTOBER 2016 - JULY 2017

Handled mediation between institutions, partner coordination, and the organization of a sustainability awareness day for 170 students and 15 partner organizations.

TECHNICAL DOMAINS

Laravel, PHP, and application structure

WooCommerce, PrestaShop, Shopify data, and catalog logic

WordPress, editorial templates, and brand sites

HTML, CSS, Sass, Vue 3, Inertia, and TypeScript

Google Merchant Center, Meta Catalog, and Meta Ads

GTM, Meta Pixel, Microsoft Ads / Bing UET, and Adobe Analytics

Consent Mode v2, privacy, data layer design, and script governance

Docker, Linux, Nginx / Apache, Cloudflare, Redis, and AWS / S3

WORKING STYLE

I prefer readable systems over performative architecture, gradual improvement over dogmatic rewrites, and technical decisions that keep product, SEO, tracking, compliance, and real usage in view at the same time.

I am especially useful when an existing system needs to be understood quickly, stabilized through useful quick wins, and given a longer-term direction without disrupting day-to-day operations.

What I am looking for

Roles or missions where the job is to understand an existing system, bring more order to the flows, and help web or commerce products evolve with real expectations around quality and clarity.

Based in Nancy, mobile across Grand Est, the Lorraine corridor, and the Großregion, and open to local, hybrid, or remote contexts.
